

Telco Laser Safety products

Training, Plan, Implement, Maintain, Management and Upgrade

CentriumTech LTD is a company that provides
consultancy services
in the field of IT and telecommunications.

Mostly provides services for the design of
telecommunication networks and systems,
but also provides services related to
the operational use of network equipment.

CentriumTech LTD is a company that provides reliable services as
a result of our dedicated goals
for professional and practicable products
bringing real experience value for the customers.

We can offer you three products related to the Telco Laser Safety: ***Telco Laser Safety Documentation Toolkit, Telco Laser Safety training and Laser Safety Officer certification.***

1. Telco Laser Safety Documentation Toolkit

As any other Documentation Toolkit, as an example ISO 27001 Documentation Toolkit, ***Telco Laser Safety Documentation Toolkit*** contains documents which are related to the subject that operational organization need to understand, implement, manage and maintain.

These documents provide support for the organization to manage the Laser Safety process and to minimize or decrease the risk from laser related personal injury in the workplace. There is information on how to understand the topic, how to achieve the safety measures, how to implement and how to maintain laser safety.

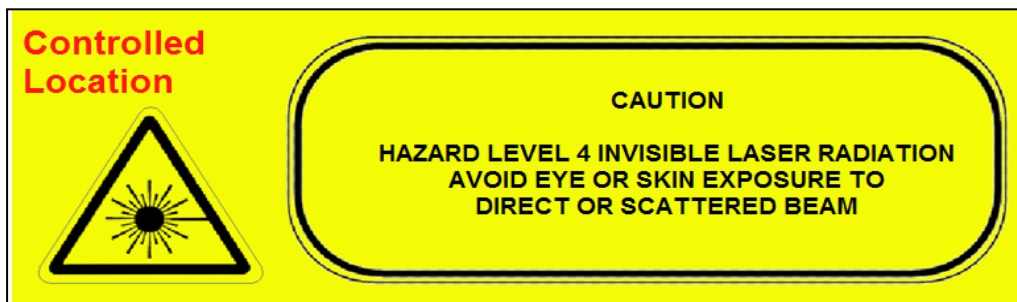

Most of the documents from ***Telco Laser Safety Documentation Toolkit*** are signed and supported from the Laser Safety Officer. Laser Safety Policy document is signed and supported from the organization CEO.

Telco Laser Safety Documentation Toolkit provides the organization with necessary information, clarification and understanding of used terms, guides, safety measures and actions, and continuous operational policies and procedures.

What organization gets is a professional relevant person in the Laser Safety Officer role, that understands the subject and is able to manage the laser safety strategy defined through the presented documents. After reading those documents Laser Safety Officer will be able to answer almost all question that gets from the organization personnel, because these documents contain examples for determination of the Hazard Level for all positions in the OFCS (Optical Fiber Communication Systems) locations, and for all types of Optical Fiber Communication Systems and Telco Laser products.

Also, Involves all other people that work in the OFCS locations to be aware of the laser hazards and to contribute to managing the overall Telco Laser Safety process.

So, finally organization gets a process that is manageable and accepted by its hierarchy and most of all it is achievable and practical and it addresses Telco Laser Safety measures during operation, maintenance, testing and servicing.

2. Telco Laser Safety training

Telco Laser Safety training are learning materials that provide information for Laser Safety, taking into deep for the topics of interest as: Laser product classification, labeling and marking, OFCS location types, Laser Hazard evaluation, laser safety measures, risk assessment for exposure to non-ionizing optical radiation, guides for testing and servicing, biological effects from non-ionizing optical radiation exposure, administrative controls, measurement of non-ionizing optical radiation in the OFCS locations etc.

Those training materials are multimedia presentation materials with a clear English vocal presenter. The text of all topics is defined and provided additionally along with the multimedia materials, for easier learning.

Learning materials are created to be understandable and shortest as it can, but the Telco Laser Safety topic is wide and contains many new terms and there are many different approaches to the subject. Our intention is to contribute in that direction in later products upgrades.

Our overall idea at the beginning of the creation of these materials was to provide a clear and understandable final product that will get the attention of the attendees to the **Telco Laser Safety training**.
